

SWITCH-IT

SMART TECHNOLOGIES

Switch-It Cool Cube™ with Pro Spot™ Proportional Switches

- **Ultimate flexibility in switch management and performance.**
- **The Cool Cube™ central hub input ports interface with multiple types of switches and sensors that automatically sense the type of switch you have engaged.**
- **Only Pro Spot™ switches provide users with precise, proportional control of their power wheelchair's speed and direction.**

Cool Cube™ Central Hub

Flexibility and Simplicity

The Cool Cube™ central hub automatically senses the type of switch you have engaged; there is no confusing set up. It is also compatible with all switch alternatives currently available on the market. Users can elect to utilize the Pro Spot™ proportional switches or opt for any combination of switches with which they may already be comfortable.

Pro Spot™ Proportional Switches

Precision Control

Pro Spot™ proportional switches offer full and continuous range of speed and direction for superior drivability. As you come in contact with the Pro Spot™ switch, the power wheelchair will begin to move at roughly 40% of programmed speed. With continued pressure (proportionality), the power wheelchair will increase to 100% of programmed speed. This represents a dramatic improvement over current proximity or mechanical switches, which deliver only two options: full on or full off.

Multiple Mounting Options

Pro Spot™ proportional switches can mount in a wide variety of switch mounting positions. Head, leg, tray and hand positions can be easily accommodated.

Full Assortment of Product Offerings

Pro Spot™ proportional switches can be ordered as a system with the Cool Cube™ central hub in a variety of configurations. Users can opt for either four or five switches and any combination of five different colors depending on personal need.

Auditory Feedback

Users can elect to activate the Cool Cube's auditory feedback option. Each port of the Cool Cube™ central hub emits a different audible tone to provide the user with an auditory signal that will coincide with the selected proportional switch. The tone has three settings: off, soft, or loud.

Additional Features

- Reliability: No moving parts and innovative multiple sensor technology
- Reimbursement: Medicare code E2328
- Included Mounting Accessory: One meter extension cable included with every Pro Spot.
